

FRB20231011A

This figure is a radio frequency spectrum plot for the fast radio burst FRB20231011A. The horizontal axis represents frequency in MHz, ranging from approximately 130 to 150 MHz. The vertical axis represents flux density in Jy, ranging from 0 to 10 Jy. The plot shows a noisy signal with a prominent, broad peak centered at approximately 143 MHz, reaching a maximum flux density of about 8 Jy. The signal is characterized by a high level of background noise, with many small, sharp peaks and troughs throughout the frequency range. A scale bar in the bottom left corner indicates a length of 10 MHz.
